Sliding Door Systems are made up of a runner and the roller carriage that it carries. These move the connected sliding door leaf and any other elements. FFD offer a wide range of innovative hardware systems for these alternatives. Our range of Sliding Door Systems with different runner types permit solutions for all furniture segments, conveniently moving door elements in all sizes and materials.

Drawer Front Attachment

A sink is a bowl-shaped plumbing fixture used for washing hands, dishwashing, and other purposes. Sinks have taps (faucets) that supply hot and cold water rinsing. They also include a drain to remove used water; this drain may itself include a strainer and/or shut-off device and an overflow-prevention device.

**L** = Length  
**W** = Width  
**D** = Depth

**Kick Plate System**
**Legs - Adjustable**

A handle, the attached piece of hardware that is used to open and close a cabinet door or drawer. Handles are available in many styles, materials and finishes. Handles are vital to door and drawer operation while they also complete the aesthetics of the room. Cabinet handles are usually adhered to the face of a door or drawer by screws that completely pass through to the other side.

Drill bits are cutting tools used to create cylindrical holes, almost always of circular cross section. Drill bits come in many sizes and have many uses.

A circular saw blade is a toothed or abrasive disc for wood.

A hole saw is a saw blade of annular (ring) shape, whose annular kerf creates a hole in the workpiece without having to cut up the core material.
